# MONTHLY ACHIEVEMENT REPORT

AUGUST 2016

## OBJECTIVES

Improving Water Supply

## SUMMARY

Moturiki is a small seven miles long Island with its geographical status, hills within the range of six hundred feet high elevation above sea level. Census reads seven to eight hundred people inhabit the ten villagers in the district of Moturiki. One big issue and question within the ten villagers through the past, till today, is how to quench the thirst of different age groups. As we talk to them we can understand the different stages and knowledge to save water, harvesting the rain from heaven is reasonable water source in their respective villagers, as we based it on the assessments taken from the house-to-house surveys. As we proceed through the unstable minds and the shock the people faced during the wrath of cyclone Winston, water problem was the main issue as it engages with the high risk of other health hazards.

## REPORT

Moturiki is a small seven miles long Island with its geographical status, hills within the range of six hundred feet high elevation above sea level. Census reads seven to eight hundred people inhabit the ten villagers in the district of Moturiki. One big issue and question within the ten villagers through the past, till today, is how to quench the thirst of different age groups. As we talk to them we can understand the different stages and knowledge to save water, harvesting the rain from heaven is reasonable water source in their respective villagers, as we based it on the assessments taken from the house-to-house surveys. As we proceed through the unstable minds and the shock the people faced during the wrath of cyclone Winston, water problem was the main issue as it engages with the high risk of other health hazards.

Visiting the ten villagers was a great pleasure for the volunteers helping communities with rain water harvesting repairs. Firsthand help and doing the construction work, in a hot sunny day was just an icing on the cake of the day.

Villagers in the district of Moturiki appreciated the work done and in kind hearted they prepared food, tea and sometimes big kava sessions. The work done by GVI team lifted the spirits of the villagers as repairs were done in their respective villagers.

Ongoing workshops for good clean drinking water in villagers referring on rain water harvesting. In terms of foreseeing water contamination, GVI team is using H2S tool kit to determine the water quality in each respective village.

Rain water projects already exist slowly in Moturiki Island, in terms of the RWH workshops repairing will definitely invest knowledge good clean drinking water and a sustainable project.

## ABOUT GVI

We're a family-run organisation with an amazing culture and an awesome team of people across the world who are passionate experts in their chosen field and will make your experience a truly unforgettable one (in a good way).

Our award-winning projects receive over 2000 participants every year, and we're proud to say that the vast majority of them describe their experience with us as 'life changing'. Our approval rate from over 20 000 participants since 1997 is over 95%.

A key component of the success of our community development and conservation projects is the participants who join our programs. Opportunities include high impact volunteering from one week and up, internships for those looking for career development opportunities, Challenges that allow a one week adventure all for a good cause and a range of programs for school groups and younger volunteers.
